Professional Summary

Data Engineer with 2+ years of experience building ETL/ELT pipelines, data warehouse solutions, and cloud-based data platforms for enterprise reporting and analytics. Experienced in data ingestion, transformation, data modeling, and integrating data from multiple business systems. Skilled at working with large datasets, developing scalable data solutions, and collaborating with stakeholders to deliver reliable and high-quality data products.

Work Experience

Associate Data Analytics Engineer

Oct 2024 – Present

Nexasoft (ISA)

- Designed and developed end-to-end ETL/ELT pipelines using Snowflake, SQL, Python, and Microsoft Fabric for business reporting and analytics.
- Built and maintained Bronze and Silver layer architectures in Snowflake, implementing data transformations, validations, and business rules using SQL.
- Loaded data from multiple sources including Oracle, REST APIs, AWS S3, SharePoint, and OneDrive using Microsoft Fabric Dataflows and Pipelines.
- Developed and scheduled automated data pipelines for data ingestion, transformation, and delivery across multiple business domains.
- Created Star Schema data models and semantic models in Microsoft Fabric to support Power BI reporting and self-service analytics.
- Used Spark Notebooks in Microsoft Fabric to process large datasets and optimize fact tables using partitioning techniques for better performance.
- Worked directly with business stakeholders to gather requirements, understand reporting needs, and deliver data solutions aligned with business goals.
- Provided production support by troubleshooting data issues, performing root cause analysis, and ensuring accurate and timely data delivery.
- Used AI tools to assist with SQL development, debugging, documentation, and faster delivery of data engineering solutions.

Data Analyst Intern

Jun 2023 – Jan 2024

Junior Robo

Remote

- Built scalable data processing systems and automated workflows for operational reporting and analytics.
- Automated data collection and transformation pipelines using JavaScript and Apps Script, improving workflow efficiency by 80%.
- Performed large-scale data cleaning and preprocessing to improve data consistency and reporting accuracy.
- Developed multiple automation workflows for reporting, communication, and operational process optimization.

Tech Stack: JavaScript, Google Sheets, Apps Script, Power BI, HTML/CSS

Projects

Spotify Data Engineering Pipeline

- Built a small ETL pipeline using AWS services to ingest and transform Spotify datasets.
- Stored and processed data using Amazon S3 and AWS Glue.
- Queried transformed data using Amazon Athena for reporting and analysis.

Technical Skills

Programming Languages: Python, SQL, JavaScript

Data Engineering: ETL/ELT, Data Modeling, Data Warehousing, API Integration

Cloud & Data Platforms: Snowflake, Microsoft Fabric, AWS (S3, Glue, Athena)

Microsoft Fabric: Dataflows Gen2, Lakehouse, Spark Notebooks, Semantic Models

Big Data: PySpark, Databricks

Databases: Snowflake, SQL Server, PostgreSQL, Oracle

BI & Analytics: Power BI, DAX, Looker Studio, Excel

Tools: Git, GitHub Actions, Postman, Power Automate

Education

B.Tech – Information Technology (Data Science)

Ajeenkya DY Patil University, Pune

2020 – 2024

GPA: 8.8 / 10
